OY2 Easter Islanders OY2

548 554 562 urged to prostitute themselves were probably unmarried girls or women belonging to a lower class. Wives of chiefs, priests, or jealous men were probably obliged to remain hidden while visitors stayed on the island.

548 562 837 There has been little change in Easter Island morals. Every foreigner who comes ashore is the object of the most provocative offers on the part of the women, assisted by the men. Prostitution is considered a great source of profit by both sexes and is practiced not only with foreigners but among the natives themselves. An elderly man may have sexual intercourse with girls of 12 or 13 years whom he pays for it. Some women who are no longer attractive take as lovers very young boys to whom they give presents or make an offer to reveal the secrets of sexual life.

831 834 [431] Despite the intense religious feeling of the islanders and the efforts of the catechist, sexual life is extremely free, usually with no restrictions whatever. Apparently love intrigues are short and devoid of sentimental background. Unions between young people are temporary and little jealousy, if any, is shown. Handsome young men who are good dancers are evidently favorites of the women. Gifts play an important part in love affairs.

436 Missionaries allude to the great "immorality" of the natives and complain that the pagan feasts, especially those that lasted a long time, were occasions for great license (230, vol. 6, p. 122). Geiseler (87, p. 29) writes:

> There are many cases of young girls remaining unmarried and belonging to the community, and they were highly valued . . . Even girls betrothed in childhood were to the moment they went to live with their husbands entirely free and might dispose of their persons without provoking scandal. In many instances girls had at least five permanent lovers. With the scarcity of women and the great number of men obliged to remain bachelors, such a condition is easily understood.

838 Pederasty does not appear among adults and no instance of such sexual aberration has been referred to by any inquirer. On the other hand, abnormal sex relationships between women is tolerated and accepted. Such relationships are between middle-aged women who are unattractive to men, and young women whom they have seduced. No other sex abnormalities have been reported.

Marriage

Marriage Laws

582 [835] When asked about marriage restrictions, the islanders would say only that *taina* (cousins) may not marry unless they are *taina haihai* (remote cousins). Relationship between brothers-in-law and sisters-in-law was considered incestuous. Degrees of relationship permissible in marriage have been accurately established by Routledge (228, vol. 2, pp. 144-145):

> Brother and sister were two degrees apart, first cousins were four degrees, second cousins six degrees, and third cousins eight degrees, a method, I may point out, evidently based upon counting from one of the related persons up to the common ancestor, and then

1: Metraux E-5 (1934-1935) 1940
OY2 Easter Islanders OY2

down again to the other. "The only restriction was that which forbade marriage" before the fourth generation—that is, it only went down to and included second cousins; so that third cousins might marry. 582

A tale dictated by my informant expresses the horror inspired by incest and the punishment that threatened those who committed this crime. The word *paakeake* applies to the act of committing incest with a cousin. 684 835

A man whose name was Taropa had sexual intercourse at night with his cousin. The girl asked, "Who are you?" He said, "I am Taropa." The girl said, "Do not touch me. You are my cousin." "No," replied Taropa, "it does not matter if you do not speak about it." He grasped the girl firmly to violate her. All the time she was protesting, "No, no, I am your cousin," but Taropa did not listen to her. In the end she grew tired of the struggle, and the man put his hand between her legs. He copulated with her. When he finished, he left and ran away. She took the sperm, put it into a piece of tapa, and kept it. At dawn she took it to her father and said, "Here is a bundle belonging to Taropa. He slept with me." The father took the bundle and put it aside. A war broke out between the Tupa-hotu and the Miru. The people fled and hid in a cave called Anatetehe-tama. The young Taropa also hid there. The father of the girl whom Taropa had violated was among the enemies. They took the people of Tupa-hotu and killed them. Taropa went out, and the girl's father cut his throat with the bone of a swordfish. He took the blood and drank it because this Taropa had slept with his own cousin.

Infant betrothal was apparently a widespread custom in olden days. Children whose parents were friends were often engaged to each other, the bride being supposedly chosen by the boy's father, especially if he were a chief. Child marriages were celebrated with the same formalities as those of the adults but the children were not allowed to live together until mature. In the only concrete instance of such a union the boy was 12 years old and the girl was the same age or younger (87, p. 29; 54, p. 717; 86, p. 39). Traditions persisting today about infant betrothal may be summarized as follows: 584

A little girl was considered the prospective wife of an adult man who waited until she became mature. The bridegroom's father brought food for his future daughter-in-law, and his present was called *taku te hunonga ma taana poki* (present of the father-in-law to his child). The father of the boy filled big baskets with fowls and carried them to the girl's house. On the other hand, an adult woman might be engaged to a little boy who received presents from his future father-in-law. 584 431

Girls often bear their first child when they are 15 or 16 years old. At marriage a woman may already have several children, frequently by different fathers. The husband does not object to the children and assumes responsibility for them as if they were his own. Widows usually marry again and there are a few women who have had three or four husbands in succession. 848 587

According to Geiseler (87, p. 29), young men married between the ages of 17 and 20. Each built a hut of his own where the girl to whom he was betrothed came to live. Geiseler states that only married men were allowed to bear the vulva motif tattooed on their chest. As this is not recorded elsewhere it is probably a misinterpretation. 582 591 304 831

OY2 Easter Islanders OY2

POLYGYNY

595 In reconstructing the past from legends and traditions one gains the impression that monogamy was general, but that several men, owing to their power or wealth, could afford many wives. The last supporters of paganism were certain chiefs who, having several wives, hesitated to become Christian lest they be obliged to part with them (230, vol. 6, p. 565). However, not all the chiefs availed themselves of this privilege and at the time of European contact there were only a few persons with several mates. No conclusion can be drawn from this situation since at that period there were just half as many women as men. I was told that the chiefs or persons of rank (*tangata honui*) were allowed several wives who were supposed to live in separate houses to avoid fighting—this last detail is perhaps a modern rationalization. Iri, Victoria's grandfather, had eight wives. A man generally resided with the first wife (*vie rae*), but sometimes several favorite wives lived with him. Viriamo, Tepano's mother, had been the second wife of a man of the Miru tribe (194, p. 227).

What truth there is in Thomson's statement (215, p. 465) that a husband could sell or lease his wife to another for a stated term I do not know. This may be an allusion to polyandric habits, as in the Marquesas. In the legend of Hamea and Raa, the two brothers live successively with the same woman. Some natives are said not to be very particular about their wives' adulteries with foreigners if some profit is to be gained.

MARRIAGE CEREMONY

[582] Young men now marry at about the age of 20; girls marry a little earlier.
585 If they have the mutual consent of their parents, a ceremony is performed at the church under the direction of the catechist. As the marriage is not considered entirely valid until it is blessed by a priest, they usually wait for the coming of the frigate *Baquedano* to have all unions consecrated by the chaplain. I have numerous proofs of the importance attached to the parents' con-
584 sent for marriage, but Roussel (190, pp. 465-466), who lived many years among the natives in the early sixties of the nineteenth century, asserts: "Marriages were contracted without consulting the will of the parents. They were decided by inclination." Roussel made the same statement to Palmer (168, p. 281) and to Gana (86, p. 39).

583 Although they visited the island at the same time and had access to the same source of information, Thomson and Cooke make contradictory state-
[584] ments concerning the formalities of marriage. Thomson (215, p. 465) says, "the betrothal is conducted by parents, the relations of the female paying a stipulated amount generally in food to be consumed by the friends at the feast given to celebrate the event." Cooke (54, pp. 716-717) states that the bride-

1: Metraux E-5 (1934-1935) 1940
OY2 Easter Islanders OY2

173 619 labor and the cousin assisted with the birth. The child was a boy. His navel cord was bitten by an old man named Humu-ave, who was later killed by the Tupa-hotu.

The elder brother gave his wife to his younger brother so that he could have a child of his own. Nine months later a male child was born. The woman returned to Taka and she became pregnant by him. This child was also a male. Then she was again given to the younger brother and a second boy was born to him. The woman was again pregnant with the third child of Taka. Later a third child was born to Parapuna. Each brother had a fourth child by the same woman. The children grew up. The people of Hamea and Raa were exterminated by the Tupa-hotu, but the enemies had not succeeded in capturing Taka and Parapuna who became progenitors of the Hamea and Raa groups, the younger one of the descent group of Hamea. The people multiplied. There was no longer a war so they returned to their country, Peperenga, near the bay of Hangoteo.

Peperenga, the place where the two brothers settled, was not far from Puna Marengo, or Hangoteo Bay, where there is an ahu called Taka Parapuna, belonging to the Hamea and Raa groups. In Estella's list (79, p. 63) of the tribes of Easter Island, Raa is mentioned as the name of the "tribe of Hangoteo."

The above legend and facts do not agree with Routledge's map, based on native information, in which the Hamea are located in the exact region of Hangoteo, and the Raa are placed together with other Hamea groups east of Anakena. According to my sources of information, most of those groups were established near Hangoteo, at the northern end of the island.

619 Supposing the traditional land division to be accurate, there would remain five groups (Haumoana, Ngatimo, Ngaure, Tupa-hotu, and Hitiuira) whose origin cannot be attributed with certainty to any known ancestor or to any ancestor whose name can be placed on a genealogical record. A logical supposition is that the curious absence of a definite district associated with the names of Hitiuira and Tupa-hotu indicates that these tribes have developed since the other groups to whom special territory was allotted. The greater importance of Marama in comparison with Ngatimo and Haumoana tends to indicate that the latter were originally subtribes of that important *mata*.

572 582 571 In speaking of the social organization of the past, the natives frequently use the word *tumu* which they do not entirely understand and cannot definitely define. Routledge and Williamson (228, vol. 2, p. 145) were both puzzled by the word. Routledge refers in her note to a "mysterious word *tumu*" which she believed to mean only "neighbour". She says " . . . it was vaguely believed that originally one only married one's *tumu*; but no such restriction existed in known time." Williamson (228, vol. 2, p. 145) believes that *tumu* "might possibly mean a human group, represented primarily by its main trunk family, and having its common origin or head. In that case, however, we should expect that the *tumu* would represent the group of people into which a man might not marry." I obtained the following definitions of *tumu*: "*Tumu* is a group from which you may get a wife. The *tumu* is a friend,

1: Metraux E-5 (1934-1935) 1940
OY2 Easter Islanders OY2

but always of another group; he plants for you, he works for you. Every group has its *tumu*." The Hamea and the Raa were pointed out to me as being the *tumu* of the Miru. Victoria told me that the Miru was the *tumu* of the Tupa-hotu, Ureohei, and Marama, as they might intermarry; but later, in speaking of the subgroups or families of the Miru, she explained that the Tekena were the *tumu* of Ureokao (both subgroups of the Miru), because they intermarried.

A *tumu* may be defined, as Routledge surmised, as "a group of people into which a man may marry." However, I was told that there were also *tumu* with whom it was impossible to contract blood alliance "because they lived too near your house. When they lived as near as parents or friends, intermarriage was impossible even though they were *tumu*." From the definitions received, I deduce that *tumu* were people of one tribe who stood in a special relation to people of another. I cannot establish any relationship between the lineages in the different *mata*. It is not clear whether marriage was obligatory or only customary between the *tumu*. Marriage was forbidden to members of two *tumu* which were closely related by blood or perhaps by living together in the same family group. Routledge believed, as I do, that members of a group who settled in the territory of another were either related to the inhabitants by marriage or were captives. Such relationship would explain why my informants defined *tumu* as a group with which there existed marriage connections, or as a group obliged to work for another.

All of the present-day members of the Miru *mata* were pointed out to Routledge and me as being *ariki-paka* (noblemen) except the king of the island who was called the *ariki-mau* (principal *ariki*). It seems unlikely that every individual in such a large and powerful tribe should be considered an aristocrat even though belonging to the king's group. Probably the status of the ordinary members of the Miru was no different from that in other tribes, but some of the dignity and pride of the royal blood extended to the whole tribe, making it a little more aristocratic than the other tribes. Any member whose genealogy could be traced could claim direct relationship to the king's family.

In sum, the tribes (*mata*) of Easter Island seem to have been separate social groups made up of descendants of a common ancestor. They were thus, fictitiously perhaps, all related by tracing their origin to the king, Hotumatua.

There were no marriage restrictions among tribes, save those of the *tumu*. There is, however, a persistent tradition on the island that it is not proper for a man of another group to marry a Miru woman. Even now the natives believe that men who disregard that tradition are punished by physical disability. Tepano and Pakomio, who married Miru women, told me with great seriousness that by so doing they had exposed themselves to grave danger.

1: Metraux E-5 (1934-1935) 1940
OY2 Easter Islanders OY2

After their wedding nights both suffered from cruel pains in the stomachs and would have died if they had not applied to Pakarati, the catechist, who saved their lives by prayer and other ritual performances. This belief is perhaps the survival of an ancient tapu against marriages between female members of the *ariki* group and common members of other *mata*. However, Routledge (194, p. 246) affirms that unions between *ariki-paka* and commoners were possible in the old days, for the daughter of the great king Nga-ara is said to have married a man of the Marama tribe. It is certain that the king had to marry in his own tribe, though not in his own lineage. Other men of the Miru could marry into any descent line.

Certain physical peculiarities were attributed to the members of the different tribes. Thus the Tupa-hotu were said to have tender feet which easily became sore in war expeditions. The Miru were bow-legged (*ngapau*).

Geographical Distribution of Tribes

Ruins of houses and ahus scattered over Easter Island correspond to the distribution of the ancient population. All villages were concentrated along the coast and the mountains and plains of the interior were sparsely inhabited. On the slope of Rano-aroi, near Vai-tea, the remains of two or three ahus may still be seen. Another ahu is a little north of Mount Oroi. On the west of the island were some villages and ahus built at the base of the slopes of Rano-aroi and at some distance from the coast. The settlements belonged to the Miru and the Hamea. Some Marama were scattered farther toward the interior. All the ancient settlements east of Vai-tea had been founded by families from groups in the east. As testified by the scarcity and the relative unimportance of the ruins, the groups living in the interior were isolated and composed of only a few members.

The ten *mata* or tribes were divided into two main divisions corresponding roughly to the western and eastern parts of the island. The western and northwestern tribes were called Tuu (usually spelled Ko Tuu) or *mata nui* (greater groups), and the eastern tribes were the people of Hotu-iti or *mata iti* (lesser groups). The reason for this dualism is not clear. There is no tradition or fact suggesting that the splitting of the *mata* into two main divisions had a social function and it is probable that it was a political institution. It was manifest mainly in a perpetual antagonism between the groups, the memory of which has been preserved in legends (p. 74). It is important to stress the fact that the tribes of the eastern division are more frequently mentioned under the collective name of Hotu-iti that the tribes of the west are under the name Tuu. Thus it may be inferred that the eastern tribes were more unified than the western ones. The above data implies that Hotu-iti was a primary tribe which divided into smaller groups. Tuu seems to be a simple geographic designation. Near Hanga-roa on the west coast there is

2:Ferdon A-5 (1956) 1957
OY2 Easter Islanders OY2

scribed by Jorge as follows: the father is the head *(mayor)* of the family while the first born son is the head of the children, thus the father and the first born son must stand in special relationship to one another and to the total family.

ADOLESCENCE

There are no formal puberty rites existing on the island today, but the period at which a boy is said to become a man is reasonably well fixed in the minds of the people. According to Jorge and Roberto, in earlier days a boy did not become a man, nor did he do a man's work, until he reached the age of twenty, his time being occupied until then in play and fun. Today, however, most native children go to the Chilean-run school from the ages of nine until twelve, after which the boys, at least, are expected to start doing some work. Thus, when Juan Atan's wife became ill and he was unable to come to work, he sent his thirteen year old son to take his place. Although doing a full day's work at a man's job, this youth was consistently referred to as a *poki*, or boy. Some indication of when he would be regarded as a man was presented on the job one day. My workmen caught the boy examining one of the many pictographs at Orongo called *komari*, which stylistically depict a vulva. The men immediately began to joke him terrifically, and during the joking Jorge turned to me and remarked, "He will be ready for that in another two years." From this, it would appear that fifteen years of age may be taken as the approximate age for a young man to enter into mature sex relations and, in general, become a man.

Further evidence along this line was brought forward during a discussion of who could, or could not, vote in the election of the three natives who stand as representatives of the people before the governor of the island. Among the natives there was no fixed age at which a person could vote, the consistent theme being that one could vote when one became a man. Asked if the Atan youth could vote, they informed me that he could not as he was still a *poki*. It was only after considerable questioning and discussion that my workers came to the conclusion that a person of approximately fifteen or sixteen years of age had reached the age of manhood and had the right to vote. An approximately similar age for womanhood appears to hold for girls, as well. At least a search of the government population records showed the earliest age for the marriage of girls was fifteen.

COURTING

Unmarried girls from about fourteen or fifteen onward are given complete sexual freedom which does not begin and end with a possible suitor but is maintained with any passing boy friend. Such relationships are taken quite as casually

2:Ferdon A-5 (1956) 1957
OY2 Easter Islanders OY2

up to the parents, though Jorge mentioned that other relatives might be consulted at this time. However, such consultation cannot be long extended, for consent — or rejection — is given very shortly. If accepted, the father of the boy immediately pours some drinks and both families and their relatives are sent for and a party is given that very day.

MARRIAGE

When a couple is about to marry, the father of the bridegroom designates one of his brothers to collect presents from the family. Those who are supposed to give at this time are the father's brothers and sisters, cousins, *compadres*, and certain individuals related by marriage.[3] Of considerable interest is the fact that the male members of the father's *tumu*, or — to use the islander's present Spanish term — *aliados*, must give presents at this time.[4] Although the *tumu* no longer operates to the extent that marriage must be within the *tumu*, though such is looked upon with high favor, its continued existence is clearly recognized in that not only do its members give marriage gift-exchange presents to any one of their members whose son or daughter is being married, but they are automatically invited to any feasts given by any member of the *tumu*.

The gifts collected at this time, which may consist of foodstuffs, cows, pigs, cloth, or money, are turned over to the bridegroom's father who then invites the bride's father and her extended family to a feast, and they come bringing guitars for singing and dancing. After the feast the bridegroom's father presents to the bride's father the accumulated gifts his brother has collected. At such a time the gifts may often be spread out in the form of a boat.

Some time after the bride's father has received his gifts, one of his brothers or sisters is designated to collect gifts from the bride's family which are then turned over to the bride's father. It is now his turn to invite the bridegroom's father and extended family to his home for a feast, after which the collected gifts are presented to the bridegroom's father. In all of this, the engaged couple receive nothing, for, as Jorge pointed out, when they get married they will have each other and that is sufficient.

Although common law marriages unaccompanied by ceremony still exist, the

3 I was unable to determine precisely which relatives by marriage must present gifts, in that I found out too late that Easter Islanders use the Spanish word *cuñado*, or brother-in-law, loosely to include husbands of cousins and even nieces, not all of whom are required to give presents.

4 A *tumu* is a group of lineages into which, in former times, a man might marry. The *tumu* to which the Tepano family belongs, for example, consists of the Tepano, Pakomio, and Paoa lineages.

3:Drapkin D-5 (1934-1935) 1935
OY2 Easter Islanders OY2

showing the number of individuals with mixed blood, but second place, immediately following the Tahitian, in the table of percentages. This apparent contradiction is explained by the recent influx of Chilean blood, which tends to increase, while Tahitian, German, French and other older strains have a tendency to diminish, so that the proportions of these elements are rather low.

CIVIL REGISTRATION

The great freedom which prevails in sexual relations does not prevent frequent legal marriages. As a general rule, the natives marry young and a celibate over 30 years of age is an exception. In numerous instances widowed persons remarry, especially if still young, and there are widows who have had three or four husbands (Catalina Tori Makotahia, for example).

Therefore, even if one considers as celibates all the young people over 13 years, the percentage of married people remains always greater.

	Individuals	Percent
Married	112	46.66
Celibates	94	38.74
Widowed persons	34	14.60
Total	240	100.00

ILLEGITIMATE AND LEGITIMATE CHILDREN

From 1915 to 1917, following the creation of a government register at Easter Island, almost all the unions which had been given religious consecration were legalized and at the same time the greater number of the children legitimized. That is why we shall consider as illegitimate those children who were born out of wedlock after 1917 and those who were not recognized at that time.

Even with these reservations the number of illegitimate children is fairly high. It amounts to 96, which constitutes 21 percent of the total population.

ILLITERACY

Public instruction in Easter Island until the past year was the most rudimentary. Long periods of no schooling at all alternated with more or less accidental sessions of class work. It was not until 1934 that a public school was organized, always dependent upon the

15;Routledge E-5 (1914-1915) 1919
OY2 Easter Islanders OY2

sources how great was the impression which was made by the foreigners.

Social Life.—Roggeveen's description of the people as being of all shades of colour is still accurate. They themselves are very conscious of the variations, and when we were collecting genealogies, they were quite ready to give the colour of even remote relations: "Great-aunt Susan," it would be unhesitatingly stated, was "white," and "Great-aunt Jemima black." The last real ariki, or chief, was said to be quite white. "White like me?" I innocently asked. "You!" they said, "you are red"; the colour in European cheeks, as opposed to the sallow white to which they are accustomed, is to the native our most distinguishing mark. It is obvious that we are dealing with a mixed race, but this only takes us part of the way, as the mixture may have taken place either before or after they reached the island.

They were divided into ten groups, or clans ("máta"), which were associated with different parts of the island, though the boundaries blend and overlap; members of one division settled not infrequently among those of another. Each person still knows his own clan.

In remembered times there were no group restrictions on marriage, which took place indiscriminately between members of the same or of different clans. The only prohibition had reference to consanguinity, and forbade all union nearer than the eighth degree or third cousins. These ten clans were again grouped, more especially in legend or speaking of the remote past, into two major divisions known as Kotuu (or Otuu), and Hotu Iti, which correspond roughly with the western and eastern parts of the island. These divisions were also known respectively as Mata-nui, or greater clans, and Mata-iti, or lesser clans. The lower portions of the island were the most densely populated parts, especially those on the coast, and the settlements on the higher ground appear to have been few (fig. 91).

In Kotuu, the Marama and Háumoana inhabited side by side the land running from sea to sea between the high central ground and the western volcano Rano Kao. They had a small neighbour, the Ngatimo, to the south, and jointly with the Miru spread over Rano Kao and formed settlements by the margin of the crater lake. The Miru lived on the high, narrow strip

15:Routledge E-5 (1914-1915) 1919
OY2 Easter Islanders OY2

to a relative, who was the father of an old man from whom we managed to obtain it. When the time came to hand it over to us, the late owner began to cling to it affectionately, and say that he "wept much at the thought of its going to England"; as, however, the bargain had already been completed, we remained obdurate, and at the time of writing Hotu resides with Ko Tori at the Royal College of Surgeons.

The Miru were unique in other ways; they were the only group which had a headman or chief, who was known as the "ariki," or sometimes as the "ariki-mau," the great chief, to distinguish him from the "ariki-paka," a term which seems to have been given to all other members of the clan.[1] The office of ariki-mau was hereditary, and he was the only man who was obliged to marry into his own clan. It was customary when he was old and feeble that he should resign in favour of his son. There are various lists of the succession of chiefs, counted from the first immigrant, Hotu-matua. The oldest lists are those given by Bishop Jaussen[2] and by Admiral Lapelin,[3] which contain some thirty names. Thomson gives one with fifty-seven. In our day there was admittedly much uncertainty about the sequence, but the number was said to be thirty,[4] and two independent lists were obtained. All these categories differ, though they contain many of the same names, particularly at the beginning and end.

The last man to fill the post of ariki with its original dignity was Ngaara; he died shortly before the Peruvian raid, and becomes a very real personage to anyone inquiring into the history of the island. He was short, and very stout, with white skin, as had all his family, but so heavily tattooed as to look black. He wore feather hats of various descriptions, and was hung round both back and front with little wooden ornaments, which jingled as he walked. When our authorities can remember him his wife was dead and he lived with his son Kaimokoi. It was not permitted to see them eat, and no one but the servants was allowed to enter the house. His headquarters were at Anakena, the cove on the island where, according to tradition, the first canoe landed.

[1] Evidence on this head was rather contradictory, but no Miru could be found, male or female, to whom the title was not given.
